# SECTIONAL GARAGE DOOR STOPPER INSTALLATION GUIDE
**Applicable to SECTIONAL GARAGE DOORS ONLY**

To prevent garage doors from being forced open during protracted power outages or a failure of the automation system, CENTURION has developed a device that can be installed directly onto the garage door track and acts as an additional security measure by locking the door in the closed position.

Engage / Disengage

Release Handle

**FIGURE 1**

**FIGURE 2**

Start by disengaging the operator. For the CENTURION SDO4, this is done by pulling the manual release handle down towards you until a click is "felt".

Lower the Garage Door until it is in the fully closed position.

Fly Nut

Washer

Track

Hole in Track

Garage Door Guide Roller

Garage Door Stopper

**FIGURE 3**

Remove the Fly Nut and one Washer from the **Garage Door Stopper** provided in the kit, and insert the lock into a hole in the track directly above one of the Garage Door Guide Rollers.
In the unlikely event that there is no hole in the track that would be suitable for the installation of the **Garage Door Stopper**, a 6mm hole must be drilled into the track directly above one of the guide rollers.

Garage Door Track

Garage Door Stopper Stud

Fly Nut

Washer

**FIGURE 4**

Secure the lock by fitting the Washer and Fly Nut to the Stud of the **Garage Door Stopper** protruding through to the other side of the track.

**! CAUTION**

**FIGURE 5**

Ensure that the **Garage Door Stopper** is removed once the system has returned to normal operation.
